Guardium®
SAFEGUARDING DATABASES™

Guardium Joins EMC NAS Partner Program

Robust Database Security and Auditing Solutions with EMC's Leading NAS Solutions
Deliver Critical Information Protection Solutions

WALTHAM, MA, September 12, 2005 Guardium, Inc., a leading provider of database security and compliance solutions, today announced it has joined the EMC NAS Partner Program to help mutual customers with Guardium's SQL Guard™ and the EMC Celerra™ network attached storage (NAS) product line.

Guardium's SQL Guard is the industry's first real time and continuous database security and auditing platform. The non-intrusive, zero impact solutions empower organizations to extend the boundary of database security. The SQL Guard Security Suite™ addresses all aspects of database security and auditing within a single system, including dynamic database security health assessment, intelligent and vault safe auditing, policy-based database access control and enforcement and more, without effecting database performance. Guardium supports all major database platforms, including Oracle, IBM, Microsoft and Sybase, and can easily be extended to support any other relational database platform. SQL Guard systems are deployed for security, auditing, compliance and identity theft prevention applications.

"We are pleased that Guardium has joined the EMC NAS Partner Program," said Mark Greenlaw, Senior Director NAS Product Marketing at EMC. "We look forward to working with Guardium to ensure that our mutual customers have the highest level of support possible for their information protection initiatives."

"We are excited to be part of the EMC NAS Partner Program," said Ola Mayer, Director of Product Marketing at Guardium. "Together, we can offer our mutual customers exceptional information protection solutions and support."

Guardium's family of database security products includes:

- SQL Guard Database Security Platform: The industry's first non-intrusive, network-based database security platform provides unprecedented protection of distributed, enterprise-wide data in IBM, Oracle, Microsoft and Sybase environments. SQL Guard provides granular role separation and simplifies database security operations by reducing the need for technical skills as well as the need to analyze volumes of logs.
- SQL Guard Security Suite: An integrated set of task-oriented applications (SQL HealthGuard™, SQL PolicyGuard™ and SQL AuditGuard™) that automates intelligent and vault safe auditing, dynamic and real time health assessment and access control for continuous protection of information integrity and database infrastructure.
- SQL Guard Compliance Accelerators: A library of IT governance (SOX/GLBA/PCI/Basel II/HIPAA) reports/tests that is packaged with the SQL Guard Security Suite applications and SQL Guard platform to automate, accelerate and simplify database security operations for regulatory compliance initiatives.
- SQL Guard Database Firewall: A breakthrough firewall that extends Guardium's database security platform by delivering the industry's first SQL-level, policy-based database firewall. With this solution, companies can obtain database access auditing, detection, and prevention capabilities with a single platform.
- SQL RemoteGuard™: A non-intrusive software monitoring probe that makes it easy to protect databases in departmental and remote, distributed sites.

About Guardium
Headquartered in Waltham, MA, Guardium (www.guardium.com) develops and delivers innovative database security solutions that remove complexity, and provide visibility and effective controls over database access activities of IBM, Oracle, Microsoft, and Sybase environments. Guardium's family of non-intrusive, robust applications addresses key database security concerns that include database security assessment, access policy control and enforcement, auditing, and regulatory compliance. Guardium's growing customer base includes some of the world's most technically advanced organizations representing a wide range of industries. Financial services, telecommunications, media, manufacturing, healthcare, and government organizations trust Guardium's solutions to protect their mission critical data and handle their compliance challenges. Guardium investors include the Cedar Fund, Ascent Venture Partners, Veritas Venture Partners, and StageOne Ventures.
